L2: Entry 25 of 44

File: USPT

Oct 21, 1997

DOCUMENT-IDENTIFIER: US 5679640 A TITLE: Immunosuppressant peptides

Brief Summary Paragraph Right (6):

Current treatment for autoimmune disease consists primarily of treating the symptoms, but not intervening in the etiology of the disease. Broad spectrum chemotherapeutic agents are typically employed, which agents are often associated with numerous undesirable side effects. For instance, a variety of agents have been used to manage rheumatoid arthritis: i) non-steroidal anti-inflammatory drugs may alleviate pain, swelling, and tissue destruction in some patients, but are often associated with ulcers, kidney damage and gastrointestinal upset; ii) injectable gold salts may induce a remission of the disease, but are associated with lesions of the mucous membranes, kidney damage, and accelerated degradation of platelets; iii) anti-malarial drugs and anti-cancer agents (e.g., methotrexate) have been used but may be severely toxic; and, iv) corticosteroids have been used with varying degrees of success and, unfortunately, frequent side effects.

Detailed Description Paragraph Right (32):

Other autoimmune associated disorders for which the peptides of the invention may be employed to relieve the symptoms of, treat or prevent the occurrence or reoccurrence of include, for example, Sjogren syndrome, scleroderma, polymyositis, dermatomyositis, systemic lupus erythematosus, juvenile rheumatoid arthritis, ankylosing spondylitis, myasthenia gravis (antibodies to acetylcholine receptors), bullous pemphigoid (antibodies to basement membrane at dermal-epidermal junction), pemphigus (antibodies to mucopolysaccharide protein complex or intracellular cement substance), glomerulonephritis (antibodies to glomerular basement membrane), Goodpasture's syndrome, autoimmune hemolytic anemia (antibodies to erythrocytes), Hashimoto's disease (antibodies to thyroid), pernicious anemia (antibodies to intrinsic factor), idiopathic thrombocytopenic purpura (antibodies to platelets), Grave's disease, and Addison's disease (antibodies to thyroglobulin), and the like.
